SUMMARY

Frontend engineer with 1.5+ years of professional experience building React and TypeScript interfaces for a consumer DeFi application used by 100,000+ accounts. Turn Figma designs into reusable components and responsive, animated layouts, and stay close to users as the team's primary support contact. Went from fundraising to engineering in three years, and use AI to move faster, never to skip the review.

TECHNICAL SKILLS

Frontend & UI: React, Next.js, TypeScript, JavaScript, HTML, CSS (Flexbox, Grid, animation), Tailwind CSS, Vite

Design & UX: Figma, design-to-code, reusable components and UI patterns, responsive design, interaction design

Performance & Data: RPC call efficiency, onchain data fetching, REST APIs, Node.js, Supabase, SQL, Python

AI-Assisted Development: Claude Code, Cursor, Model Context Protocol (MCP), AI-assisted prototyping

Tools & Practices: Jest, Playwright, Git, GitHub, Vercel, CI/CD, code review, technical documentation

EXPERIENCE

Web Developer (Frontend & DevOps)

March 2025 – Present

Alma Labs, LLC

Nashville, TN (Remote)

- Shipped a desktop and mobile redesign of the company's DeFi protocol [landing page](#) in about a week, turning a non-technical designer's Figma files into responsive, animated React.
- Built 10+ reusable React components and UI patterns used across multiple repos, including transaction and account modals and wallet sign-in flows, for an application used by 100,000+ accounts.
- Traced slow page loads reported in support tickets to excessive RPC calls, then built a private RPC mode that routes calls through a user's own endpoint, cutting latency complaints from several a day to 1-2 a week.
- Added an in-context FAQ tooltip to the account management modal after users kept missing a \$1 minimum for weekly claims automation in the docs; related support questions dropped off almost immediately.
- Built core frontend for an [onchain game](#) (explorable maps, NPC interactions, a creature hunting and battle system, menus), wired to 25+ smart contracts.
- Turned a founder's analytics dashboard into the team's main ops tool, one feature at a time, saving an estimated 10-15 hours of manual contract work per week.
- Automated a 15-step manual process for listing new LP pools and tokens with Node and TypeScript, cutting common tasks from 30 to 5 minutes across 370+ pools.
- Primary support contact for a 6,000-member community; gather UX/UI feedback and write reports recommending which improvements are worth the dev time.
- Authored the company's official TypeScript SDK and solo-built MCP and Agent Commerce Protocol integrations that give AI agents access to the product.

Project Manager

March 2024 – October 2024

Mattered, LLC

Irvine, CA (Remote)

- Coordinated a client's new subscription service and legacy-to-custom database migration, shipping on target with minimal downtime.

Major Gifts Officer & Development Officer

August 2018 – August 2023

Lancaster General Health Foundation; Penn State Health

Lancaster & Hershey, PA

EDUCATION

Flatiron School | Software Engineering Certification

August 2023 – December 2023

Seton Hall University | Bachelor of Arts in Psychology

August 2013 – May 2017
